

Where children are born can affect their chances for a strong start in life. Babies need good health, strong families, and positive early learning experiences to foster their healthy brain development and help them realize their full potential.

This fact sheet provides a snapshot of how infants, toddlers, and their families are faring with respect to these three developmental domains. For each domain, selected child or family indicators and policy indicators are highlighted and compared to national averages. Important demographic information is also included. A summary table of all indicators is provided on the last page, for reference.

Demographics

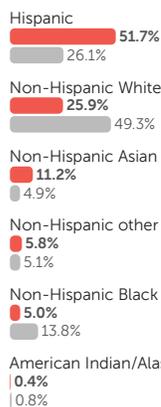

Infants and toddlers in California

Overview

California is home to 1,476,631 infants and toddlers, representing 3.7 percent of the state's population. As many as 43 percent live in households with incomes less than twice the federal poverty line (in 2017, about \$50,000 a year for a family of four), placing them at economic disadvantage. America's youngest children are diverse and are raised in a variety of family contexts. A broad array of policies and services are required to ensure that all of them have an equitable start in life.

What is Good Health?

Good physical and mental health provide the foundation for babies to develop physically, cognitively, emotionally, and socially. The rate of brain growth is faster in the first 3 years than at any other stage of life, and this growth sets the stage for subsequent development. Access to good nutrition and affordable maternal, pediatric, and family health care are essential to ensure that babies receive the nourishment and care they need for a strong start in life.

California falls in the Working Effectively (W) tier of states when it comes to the overall health of infants and toddlers. The state's high ranking in the Good Health domain primarily reflects indicators of maternal health, nutrition, food security, and health care access and affordability. However, California is in the Getting Started (G) tier of states when it comes to the percentage of young children who had a preventive medical and dental visit in the past year.

Six Key Indicators of Good Health

KEY ← Range of all state values → ▼ California ○ National average
G Getting Started R Reaching Forward O Improving Outcomes W Working Effectively

Medicaid plan covers IECMH services at home	Yes <input checked="" type="checkbox"/>
Medicaid plan covers IECMH services at pediatric/family medicine practices	Yes <input checked="" type="checkbox"/>
Medicaid plan covers IECMH services at ECE programs	No <input type="checkbox"/>

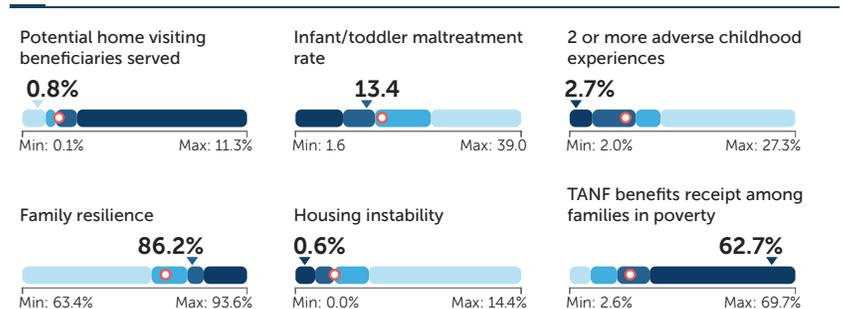

What Defines Strong Families?

Young children develop in the context of their families, where stability and supportive relationships nurture their growth. All families of infants and toddlers benefit from support with parenting, and many—particularly those challenged by economic instability—need access to resources that help them meet their children's daily and developmental needs. Important supports include home visiting services, child welfare systems that are responsive to young children's needs, and family-friendly employer policies that provide paid sick and family leave.

California falls in the Improving Outcomes (O) tier of states when it comes to indicators of Strong Families. The state's high ranking in this domain reflects indicators of access to basic needs and supports, such as TANF benefits for families living in poverty. However, compared to other states, a relatively higher percentage of parents of infants and toddlers in California rate their neighborhoods as unsafe, a higher percentage of infants and toddlers live in crowded housing, and a lower percentage of eligible infants and toddlers receive home visiting services; for all these indicators, California is in the Getting Started (G) tier.

Paid family leave	Yes <input checked="" type="checkbox"/>

What Defines Positive Early Learning Experiences?

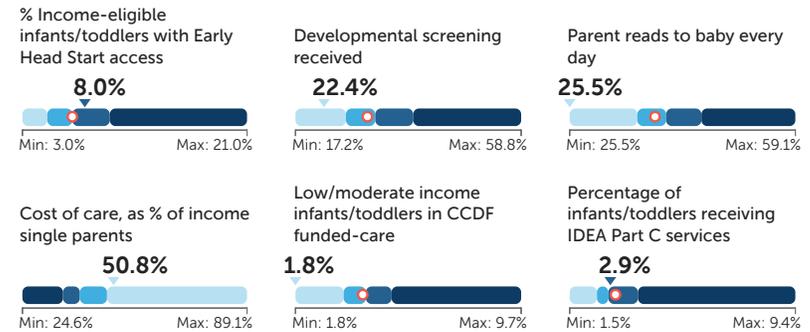

Infants and toddlers learn through play, active exploration of their environment, and, most importantly, through interactions with the significant adults in their lives. The quality of babies' early learning experiences at home and in other care settings has a lasting impact on their preparedness for life-long learning and success. Parents who require child care while they work or attend school need access to affordable, high-quality care options that promote positive development.

California scores in the Getting Started (G) tier of states when considering key factors related to early care and education and early intervention for infants and toddlers. The state's low ranking in the Positive Early Learning Experiences domain reflects the state's more burdensome infant care costs as a percentage of single and married parents' incomes, and its lower percentage of parents who read to and sing songs to their babies daily, when compared to most other states. However, California is doing better when it comes to the percentage of income-eligible children with access to Early Head Start, which places the state in the Improving Outcomes (O) tier for this indicator.
