

**W**here children are born can affect their chances for a strong start in life. Babies need good health, strong families, and positive early learning experiences to foster their healthy brain development and help them realize their full potential.

This fact sheet provides a snapshot of how infants, toddlers, and their families are faring with respect to these three developmental domains. For each domain, selected child or family indicators and policy indicators are highlighted and compared to national averages. Important demographic information is also included. A summary table of all indicators is provided on the last page, for reference.

## Demographics

### Infants and toddlers in Hawaii

#### Overview

Hawaii is home to 53,613 infants and toddlers, representing 3.8 percent of the state's population. As many as 28 percent live in households with incomes less than twice the federal poverty line (in 2017, about \$50,000 a year for a family of four), placing them at economic disadvantage. America's youngest children are diverse and are raised in a variety of family contexts. A broad array of policies and services are required to ensure that all of them have an equitable start in life.

## What is Good Health?

Good physical and mental health provide the foundation for babies to develop physically, cognitively, emotionally, and socially. The rate of brain growth is faster in the first 3 years than at any other stage of life, and this growth sets the stage for subsequent development. Access to good nutrition and affordable maternal, pediatric, and family health care are essential to ensure that babies receive the nourishment and care they need for a strong start in life.

Hawaii falls in the Working Effectively (W) tier of states when it comes to the overall health of infants and toddlers. The state's low ranking in the Good Health domain primarily reflects indicators of food security and maternal health. The percentage of infants and toddlers who had a preventive dental visit within the past year falls in the Working Effectively (W) tier, though the percentage who had a preventive medical visit within the past year is in the Getting Started (G) tier.

## What Defines Strong Families?

Young children develop in the context of their families, where stability and supportive relationships nurture their growth. All families of infants and toddlers benefit from support with parenting, and many—particularly those challenged by economic instability—need access to resources that help them meet their children's daily and developmental needs. Important supports include home visiting services, child welfare systems that are responsive to young children's needs, and family-friendly employer policies that provide paid sick and family leave.

Hawaii falls in the Improving Outcomes (O) tier of states when it comes to indicators of Strong Families. The state's high ranking in this domain primarily reflects its scores on child welfare indicators, such as Hawaii's lower prevalence of adverse childhood experiences in comparison to most other states. However, on some indicators related to access to basic needs and supports—notably, crowded housing and housing instability—Hawaii is within the Getting Started (G) tier.

### What Defines Positive Early Learning Experiences?

Infants and toddlers learn through play, active exploration of their environment, and, most importantly, through interactions with the significant adults in their lives. The quality of babies' early learning experiences at home and in other care settings has a lasting impact on their preparedness for life-long learning and success. Parents who require child care while they work or attend school need access to affordable, high-quality care options that promote positive development.

Hawaii scores in the Reaching Forward (R) tier of states when considering key indicators related to early care and education and early intervention for infants and toddlers. The state's low ranking in the Positive Early Learning Experiences domain reflects the percentage of parents who read to and sing songs to their babies daily, as well as the state's more burdensome infant care costs, as a percentage of single parents' and married parents' incomes. However, the state's percentage of low-income families eligible for child care subsidies is in the Improving Outcomes (O) tier.
