

Where children are born can affect their chances for a strong start in life. Babies need good health, strong families, and positive early learning experiences to foster their healthy brain development and help them realize their full potential.

This fact sheet provides a snapshot of how infants, toddlers, and their families are faring with respect to these three developmental domains. For each domain, selected child or family indicators and policy indicators are highlighted and compared to national averages. Important demographic information is also included. A summary table of all indicators is provided on the last page, for reference.

Demographics

Infants and toddlers in Kentucky

Overview

Kentucky is home to 165,675 infants and toddlers, representing 3.7 percent of the state's population. As many as 53 percent live in households with incomes less than twice the federal poverty line (in 2017, about \$50,000 a year for a family of four), placing them at economic disadvantage. America's youngest children are diverse and are raised in a variety of family contexts. A broad array of policies and services are required to ensure that all of them have an equitable start in life.

What is Good Health?

Good physical and mental health provide the foundation for babies to develop physically, cognitively, emotionally, and socially. The rate of brain growth is faster in the first 3 years than at any other stage of life, and this growth sets the stage for subsequent development. Access to good nutrition and affordable maternal, pediatric, and family health care are essential to ensure that babies receive the nourishment and care they need for a strong start in life.

Kentucky falls in the Getting Started (G) tier of states when it comes to the overall health of infants and toddlers. The state's low ranking in the Good Health domain reflects indicators of nutrition, food security, and children's health, such as low birthweight. However, Kentucky's percentage of uninsured low-income infants and toddlers is in the Working Effectively (W) tier.

Medicaid plan covers IECMH services at pediatric/family medicine practices	Yes <input checked="" type="checkbox"/>
Medicaid plan covers IECMH services at ECE programs	Yes <input checked="" type="checkbox"/>

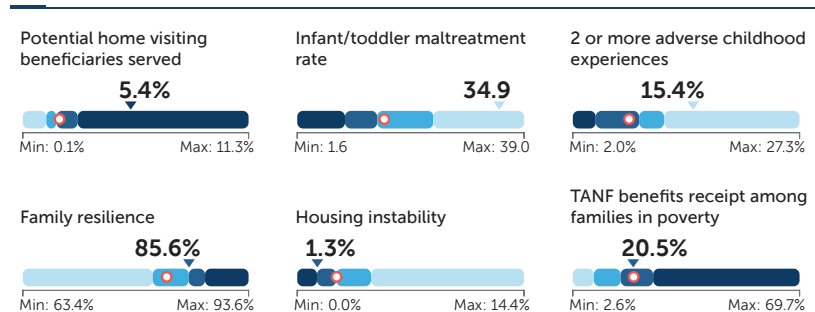

What Defines Strong Families?

Young children develop in the context of their families, where stability and supportive relationships nurture their growth. All families of infants and toddlers benefit from support with parenting, and many—particularly those challenged by economic instability—need access to resources that help them meet their children's daily and developmental needs. Important supports include home visiting services, child welfare systems that are responsive to young children's needs, and family-friendly employer policies that provide paid sick and family leave.

Kentucky falls in the Reaching Forward (R) tier of states when it comes to indicators of Strong Families. The state's low ranking in this domain reflects some child welfare indicators, such as the prevalence of adverse childhood experiences, and the infant/toddler maltreatment rate. However, the percentage of young children in Kentucky living in crowded housing is lower compared to most other states, placing this indicator in the Working Effectively (W) tier.

What Defines Positive Early Learning Experiences?

Infants and toddlers learn through play, active exploration of their environment, and, most importantly, through interactions with the significant adults in their lives. The quality of babies' early learning experiences at home and in other care settings has a lasting impact on their preparedness for life-long learning and success. Parents who require child care while they work or attend school need access to affordable, high-quality care options that promote positive development.

Kentucky scores in the Improving Outcomes (O) tier of states when considering key indicators related to early care and education and early intervention for infants and toddlers. The state's high ranking in the Positive Early Learning Experiences domain reflects indicators such as its relatively less burdensome infant care costs as a percentage of single parents' and married parents' incomes, and the percentage of infants and toddlers receiving IDEA Part C services, in comparison to other states. Kentucky has a lower percentage of young children who have received a developmental screening in the past year, compared to those in most other states.
