

Where children are born can affect their chances for a strong start in life. Babies need good health, strong families, and positive early learning experiences to foster their healthy brain development and help them realize their full potential.

This fact sheet provides a snapshot of how infants, toddlers, and their families are faring with respect to these three developmental domains. For each domain, selected child or family indicators and policy indicators are highlighted and compared to national averages. Important demographic information is also included. A summary table of all indicators is provided on the last page, for reference.

Demographics

Infants and toddlers in Michigan

Overview

Michigan is home to 341,240 infants and toddlers, representing 3.4 percent of the state's population. As many as 48 percent live in households with incomes less than twice the federal poverty line (in 2017, about \$50,000 a year for a family of four), placing them at economic disadvantage. America's youngest children are diverse and are raised in a variety of family contexts. A broad array of policies and services are required to ensure that all of them have an equitable start in life.

What is Good Health?

Good physical and mental health provide the foundation for babies to develop physically, cognitively, emotionally, and socially. The rate of brain growth is faster in the first 3 years than at any other stage of life, and this growth sets the stage for subsequent development. Access to good nutrition and affordable maternal, pediatric, and family health care are essential to ensure that babies receive the nourishment and care they need for a strong start in life.

Michigan falls in the Reaching Forward (R) tier of states when it comes to the overall health of infants and toddlers. The state's low ranking in the Good Health domain reflects indicators of food security, nutrition, and children's health. However, the percentage of women in Michigan receiving late or no prenatal care and the percentage of uninsured low-income infants and toddlers are in the Improving Outcomes (O) tier.

Medicaid plan covers IECMH services at home	Yes <input checked="" type="checkbox"/>
Medicaid plan covers IECMH services at pediatric/family medicine practices	No <input checked="" type="checkbox"/>
Medicaid plan covers IECMH services at ECE programs	Yes <input checked="" type="checkbox"/>

What Defines Strong Families?

Young children develop in the context of their families, where stability and supportive relationships nurture their growth. All families of infants and toddlers benefit from support with parenting, and many—particularly those challenged by economic instability—need access to resources that help them meet their children's daily and developmental needs. Important supports include home visiting services, child welfare systems that are responsive to young children's needs, and family-friendly employer policies that provide paid sick and family leave.

Michigan falls in the Getting Started (G) tier of states when it comes to indicators of Strong Families. The state's low ranking in this domain reflects indicators of child welfare, such as the infant/toddler maltreatment rate, and neighborhood safety. For the percentage of infants and toddlers living in crowded housing, however, Michigan falls in the Working Effectively (W) tier.

What Defines Positive Early Learning Experiences?

Infants and toddlers learn through play, active exploration of their environment, and, most importantly, through interactions with the significant adults in their lives. The quality of babies' early learning experiences at home and in other care settings has a lasting impact on their preparedness for life-long learning and success. Parents who require child care while they work or attend school need access to affordable, high-quality care options that promote positive development.

Michigan scores in the Reaching Forward (R) tier of states when considering key indicators related to early care and education and early intervention for infants and toddlers. The state's low ranking in the Positive Early Learning Experiences domain reflects indicators such as the percentage who receive a child care subsidy and the cost of infant care as a percentage of single parents' and married parents' incomes. However, in the Improving Outcomes (O) tier are the percentage of income-eligible children with access to Early Head Start and the percentage of infants and toddlers with a moderate/severe developmental delay.
