

Where children are born can affect their chances for a strong start in life. Babies need good health, strong families, and positive early learning experiences to foster their healthy brain development and help them realize their full potential.

This fact sheet provides a snapshot of how infants, toddlers, and their families are faring with respect to these three developmental domains. For each domain, selected child or family indicators and policy indicators are highlighted and compared to national averages. Important demographic information is also included. A summary table of all indicators is provided on the last page, for reference.

Demographics

Infants and toddlers in Minnesota

Overview

Minnesota is home to 211,833 infants and toddlers, representing 3.8 percent of the state's population. As many as 33 percent live in households with incomes less than twice the federal poverty line (in 2017, about \$50,000 a year for a family of four), placing them at economic disadvantage. America's youngest children are diverse and are raised in a variety of family contexts. A broad array of policies and services are required to ensure that all of them have an equitable start in life.

What is Good Health?

Good physical and mental health provide the foundation for babies to develop physically, cognitively, emotionally, and socially. The rate of brain growth is faster in the first 3 years than at any other stage of life, and this growth sets the stage for subsequent development. Access to good nutrition and affordable maternal, pediatric, and family health care are essential to ensure that babies receive the nourishment and care they need for a strong start in life.

Minnesota falls in the Working Effectively (W) tier of states when it comes to the overall health of infants and toddlers. The state's high ranking in the Good Health domain primarily reflects its scores for food security and nutrition. Minnesota's Medicaid plan covers early childhood mental health services in home settings, pediatric/family medicine practices, and early childhood education programs. However, some indicators of children's health, such as preventive medical and dental care received, are in the Getting Started (G) tier.

Medicaid plan covers IECMH services at pediatric/family medicine practices	Yes <input checked="" type="checkbox"/>
Medicaid plan covers IECMH services at ECE programs	Yes <input checked="" type="checkbox"/>

What Defines Strong Families?

Young children develop in the context of their families, where stability and supportive relationships nurture their growth. All families of infants and toddlers benefit from support with parenting, and many—particularly those challenged by economic instability—need access to resources that help them meet their children's daily and developmental needs. Important supports include home visiting services, child welfare systems that are responsive to young children's needs, and family-friendly employer policies that provide paid sick and family leave.

Minnesota falls in the Working Effectively (W) tier of states when examining key characteristics of strong families. The state's high ranking in this domain primarily reflects indicators in the subdomains of basic needs support and child welfare. Minnesota is in the Reaching Forward (R) tier for the indicators of children exiting foster care to permanency and children receiving home visiting services. Minnesota does not require employers to offer paid sick days that cover care for children, and it does not have a paid family leave program.

What Defines Positive Early Learning Experiences?

Infants and toddlers learn through play, active exploration of their environment, and, most importantly, through interactions with the significant adults in their lives. The quality of babies' early learning experiences at home and in other care settings has a lasting impact on their preparedness for life-long learning and success. Parents who require child care while they work or attend school need access to affordable, high-quality care options that promote positive development.

Minnesota scores in the Reaching Forward (R) tier of states when considering key indicators related to early care and education and early intervention for infants and toddlers. Minnesota's low ranking in the Positive Early Learning Experiences domain is primarily due to its relatively more burdensome infant care costs as a percentage of single parents' and married parents' incomes, placing Minnesota in the Getting Started (G) tier. Minnesota also does not offer child care subsidies to families at or above 200 percent of the federal poverty line. A greater percentage of Minnesota children have had a developmental screening, compared to the national average, placing Minnesota in the Working Effectively (W) tier for this indicator.
