

# The State of Montana's Babies

Where children are born can affect their chances for a strong start in life. Babies need good health, strong families, and positive early learning experiences to foster their healthy brain development and help them realize their full potential.

This state profile provides a snapshot of how infants, toddlers, and their families are faring in each of these three policy domains. Within each domain, view data for selected child, family, and policy indicators compared to national averages. The profile begins with a demographic description of the state's babies and families to offer the broadest context for exploring what may be very different experiences of the state's youngest children.

## Demographics

● Montana ● National Average

### Infants and toddlers in Montana

Montana is home to 35,545 babies, representing 3.3 percent of the state's population. As many as 43.5 percent live in households with incomes less than twice the federal poverty line (in 2019, about \$51,500 a year for a family of four), placing them at

economic disadvantage. The state's youngest children are diverse and are raised in a variety of family contexts and household structures.

## How are Montana's babies faring in Good Health?

Supporting babies' and mothers' physical and mental health provides the foundation for infants' lifelong physical, cognitive, emotional, and social well-being. Babies' brains grow rapidly in the first years of life, and, in these early years, the brain works with other organs and organ systems to set the stage for subsequent development and health outcomes. Equitable access to good nutrition during the prenatal period and first years of life is key to ensure that babies receive the nourishment and care they need for a strong start in life. Strengthening equitable access to integrated, affordable maternal, pediatric, and family health care is also essential to meeting babies' and families' health and developmental needs.

Montana falls in the Improving Outcomes (O) tier for the Good Health domain. A state's ranking is based on indicators of maternal and child health, including health care coverage, prenatal care, birth outcomes, and receipt of recommended preventive care as well as food security, nutrition, and mental health. Montana performs better than national averages on key indicators, such as the infant mortality rate and the percentage of babies breastfed at 6 months. The state is performing worse than national averages on indicators such as the percentages of babies receiving recommended vaccinations and mothers reporting less than favorable mental health.

## Key Indicators of Good Health

● Montana ● National Avg

Uninsured low-income infants/toddlers

Ever breastfed

Infants breastfed at 6 months

High weight-for-length<sup>†</sup>

Late or no prenatal care received

Mothers reporting less than optimal mental health

Infant mortality rate (deaths per 1,000 live births)

Babies with low birthweight

Preterm births<sup>†</sup>

Preventative medical care received

Preventative dental care received

Received recommended vaccines

Medical home<sup>†</sup>

## Good Health Policy in Montana

Medicaid expansion state	Yes	✓
State Medicaid policy for maternal depression screening in well-child visits	Recommended	
Medicaid plan covers social-emotional screening for young children	Yes	✓

## How are Montana's babies faring in Strong Families?

Young children develop in the context of their families, where stability, safety, and supportive relationships nurture their growth. All families may benefit from parenting supports, but children and families of color face numerous challenges as a result of racism that impact their everyday life, which are exacerbated even more for children and families living in households with low income. Many policies can be designed to address these disparities by race, ethnicity, and income, including the provision of safe and stable housing, home visiting services, family-friendly employer policies, economic support for families with low income, and tax credits that benefit families with young children.

Montana falls in the Reaching Forward (R) tier of states when it comes to indicators of Strong Families. The state's ranking in this domain reflects indicators on which it is performing better than the national average, such as the percentages of babies living in crowded housing and babies who could benefit from home visiting receiving those services. Montana is doing worse than the national average on indicators such as the percentage of babies who have had one adverse experience and the rate of babies experiencing maltreatment.

### Key Indicators of Strong Families

● Montana ● National Avg

TANF benefits receipt among families in poverty

Housing instability

Crowded housing

Unsafe neighborhoods

Family resilience

# Positive Early Learning Experiences

## How are Montana's babies faring in Positive Early Learning Experiences?

Infants and toddlers learn through interactions with the significant adults in their lives and active exploration of enriching environments. The quality of infant and toddlers' early learning experiences at home and in other care settings can impact their cognitive and social-emotional development, as well as early literacy. High-quality early childhood care can strengthen parents' interactions with their children in the home learning environment and support parents' ability to go to work or attend school. Equitable access to high-quality care across factors like race, ethnicity, and income ensures all infants and toddlers have the opportunity for optimal development; however, disparities in access to high-quality care remain across many states and communities in the United States.

Montana scores in the Improving Outcomes (O) tier for Positive Early Learning Experiences. The state's ranking in this domain reflects indicators on which it is performing better than the national average, such as the higher percentage of infants and toddlers below 100 percent of the federal poverty line with access to Early Head Start. Montana is doing worse than the national average on indicators such as the lower percentage of infants and toddlers receiving the Individuals with Disabilities Education Act Part C services.

## Key Indicators of Positive Early Learning Experiences

● Montana ● National Avg

Parent reads to baby every day

Parent sings to baby every day

Percentage of income-eligible infants/toddlers with Early Head Start access

Cost of care, as % of income single parents

Cost of care, as % of income married families

Low/moderate income infants/toddlers in CCDF funded-care

Developmental screening received

Percentage of infants/toddlers receiving IDEA Part C services

# Positive Early Learning Experiences
