

Where children are born can affect their chances for a strong start in life. Babies need good health, strong families, and positive early learning experiences to foster their healthy brain development and help them realize their full potential.

This fact sheet provides a snapshot of how infants, toddlers, and their families are faring with respect to these three developmental domains. For each domain, selected child or family indicators and policy indicators are highlighted and compared to national averages. Important demographic information is also included. A summary table of all indicators is provided on the last page, for reference.

Demographics

Infants and toddlers in Nevada

Overview

Nevada is home to 111,170 infants and toddlers, representing 3.7 percent of the state's population. As many as 51 percent live in households with incomes less than twice the federal poverty line (in 2017, about \$50,000 a year for a family of four), placing them at economic disadvantage. America's youngest children are diverse and are raised in a variety of family contexts. A broad array of policies and services are required to ensure that all of them have an equitable start in life.

What is Good Health?

Good physical and mental health provide the foundation for babies to develop physically, cognitively, emotionally, and socially. The rate of brain growth is faster in the first 3 years than at any other stage of life, and this growth sets the stage for subsequent development. Access to good nutrition and affordable maternal, pediatric, and family health care are essential to ensure that babies receive the nourishment and care they need for a strong start in life.

Nevada falls in the Getting Started (G) tier of states when it comes to the overall health of infants and toddlers. The state's low ranking in the Good Health domain primarily reflects indicators in the Getting Started (G) tier, including those for the health care access and affordability subdomain. However, most child health indicators are in the Improving Outcomes (O) tier, such as preventive dental care and recommended vaccines received among infants and toddlers.

Medicaid plan covers IECMH services at ECE programs	Yes <input checked="" type="checkbox"/>

What Defines Strong Families?

Young children develop in the context of their families, where stability and supportive relationships nurture their growth. All families of infants and toddlers benefit from support with parenting, and many—particularly those challenged by economic instability—need access to resources that help them meet their children's daily and developmental needs. Important supports include home visiting services, child welfare systems that are responsive to young children's needs, and family-friendly employer policies that provide paid sick and family leave.

Nevada falls in the Getting Started (G) tier of states when it comes to indicators of Strong Families. The state's low ranking in this domain is primarily due to indicators related to access to basic needs and supports scoring in the Reaching Forward (R) and Getting Started (G) tiers, such as housing instability and crowded housing. However, with respect to child welfare indicators, such as the state's infant/toddler maltreatment rate, Nevada is primarily in the Reaching Forward (R) tier.

Positive Early Learning Experiences

In Nevada

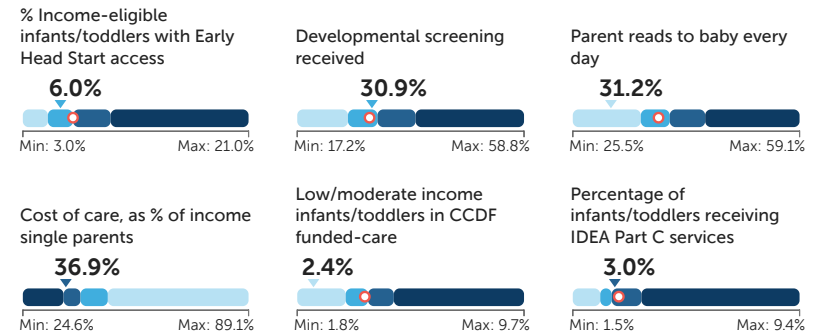

What Defines Positive Early Learning Experiences?

Infants and toddlers learn through play, active exploration of their environment, and, most importantly, through interactions with the significant adults in their lives. The quality of babies' early learning experiences at home and in other care settings has a lasting impact on their preparedness for life-long learning and success. Parents who require child care while they work or attend school need access to affordable, high-quality care options that promote positive development.

Nevada scores in the Getting Started (G) tier of states when considering key indicators related to early care and education and early intervention for infants and toddlers. The state's low ranking in the Positive Early Learning Experiences domain primarily reflects indicators in the Getting Started (G) tier. However, Nevada is in the Improving Outcomes (O) tier on indicators such as the percentage of parents singing songs to babies daily, and the state's average infant care costs as a percentage of single parents' incomes.
