

Where children are born can affect their chances for a strong start in life. Babies need good health, strong families, and positive early learning experiences to foster their healthy brain development and help them realize their full potential.

This fact sheet provides a snapshot of how infants, toddlers, and their families are faring with respect to these three developmental domains. For each domain, selected child or family indicators and policy indicators are highlighted and compared to national averages. Important demographic information is also included. A summary table of all indicators is provided on the last page, for reference.

Demographics

Infants and toddlers in New Hampshire

Overview

New Hampshire is home to 38,149 infants and toddlers, representing 2.8 percent of the state's population. As many as 27 percent live in households with incomes less than twice the federal poverty line (in 2017, about \$50,000 a year for a family of four), placing them at economic disadvantage. America's youngest children are diverse and are raised in a variety of family contexts. A broad array of policies and services are required to ensure that all of them have an equitable start in life.

What is Good Health?

Good physical and mental health provide the foundation for babies to develop physically, cognitively, emotionally, and socially. The rate of brain growth is faster in the first 3 years than at any other stage of life, and this growth sets the stage for subsequent development. Access to good nutrition and affordable maternal, pediatric, and family health care are essential to ensure that babies receive the nourishment and care they need for a strong start in life.

New Hampshire falls in the Working Effectively (W) tier of states when it comes to the overall health of infants and toddlers. The state's high ranking in the Good Health domain primarily reflects its many indicators in the Working Effectively (W) tier. In terms of health care access and affordability, New Hampshire's indicators are in the Working Effectively (W) and Improving Outcomes (O) tiers. However, the percentage of mothers reporting less than optimal mental health is in the Reaching Forward (R) tier.

Medicaid plan covers IECMH services at pediatric/family medicine practices	Yes <input checked="" type="checkbox"/>
Medicaid plan covers IECMH services at ECE programs	Yes <input checked="" type="checkbox"/>

What Defines Strong Families?

Young children develop in the context of their families, where stability and supportive relationships nurture their growth. All families of infants and toddlers benefit from support with parenting, and many—particularly those challenged by economic instability—need access to resources that help them meet their children's daily and developmental needs. Important supports include home visiting services, child welfare systems that are responsive to young children's needs, and family-friendly employer policies that provide paid sick and family leave.

New Hampshire falls in the Working Effectively (W) tier of states when it comes to indicators of Strong Families. The state's high ranking in this domain is primarily due to indicators in the Working Effectively (W) tier, including most child welfare indicators. However, New Hampshire is in the Getting Started (G) tier in terms of the percentage of children who could benefit from and are receiving home visiting services.

What Defines Positive Early Learning Experiences?

Infants and toddlers learn through play, active exploration of their environment, and, most importantly, through interactions with the significant adults in their lives. The quality of babies' early learning experiences at home and in other care settings has a lasting impact on their preparedness for life-long learning and success. Parents who require child care while they work or attend school need access to affordable, high-quality care options that promote positive development.

New Hampshire scores in the Working Effectively (W) tier of states when considering key indicators related to early care and education and early intervention for infants and toddlers. The state's high ranking in the Positive Early Learning Experiences domain primarily reflects several indicators in the Working Effectively (W) tier, such as the percentage of income-eligible infants and toddlers with access to Early Head Start. In contrast, New Hampshire has more burdensome infant care costs (as a percentage of single parents' and married parents' incomes) compared to other states, placing this indicator in the Reaching Forward (R) tier.
