

**W**here children are born can affect their chances for a strong start in life. Babies need good health, strong families, and positive early learning experiences to foster their healthy brain development and help them realize their full potential.

This fact sheet provides a snapshot of how infants, toddlers, and their families are faring with respect to these three developmental domains. For each domain, selected child or family indicators and policy indicators are highlighted and compared to national averages. Important demographic information is also included. A summary table of all indicators is provided on the last page, for reference.

## Demographics

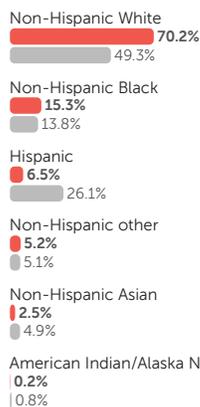

### Infants and toddlers in Ohio

#### Overview

Ohio is home to 416,395 infants and toddlers, representing 3.6 percent of the state's population. As many as 46 percent live in households with incomes less than twice the federal poverty line (in 2017, about \$50,000 a year for a family of four), placing them at economic disadvantage. America's youngest children are diverse and are raised in a variety of family contexts. A broad array of policies and services are required to ensure that all of them have an equitable start in life.

## What is Good Health?

Good physical and mental health provide the foundation for babies to develop physically, cognitively, emotionally, and socially. The rate of brain growth is faster in the first 3 years than at any other stage of life, and this growth sets the stage for subsequent development. Access to good nutrition and affordable maternal, pediatric, and family health care are essential to ensure that babies receive the nourishment and care they need for a strong start in life.

Ohio falls in the Improving Outcomes (O) tier of states when it comes to the overall health of infants and toddlers. The state's high ranking in the Good Health domain primarily reflects indicators in the infant/toddler mental health subdomain. On indicators of food security, nutrition, and maternal health, Ohio is mostly in the Reaching Forward (R) tier. However, Ohio is primarily in the Getting Started (G) tier on children's health indicators, such as the state's infant mortality rate.

Medicaid plan covers IECMH services at home	Yes <input checked="" type="checkbox"/>
Medicaid plan covers IECMH services at pediatric/family medicine practices	Yes <input checked="" type="checkbox"/>
Medicaid plan covers IECMH services at ECE programs	Yes <input checked="" type="checkbox"/>

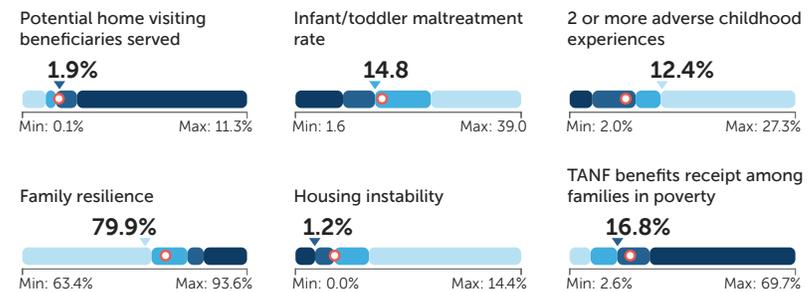

## What Defines Strong Families?

Young children develop in the context of their families, where stability and supportive relationships nurture their growth. All families of infants and toddlers benefit from support with parenting, and many—particularly those challenged by economic instability—need access to resources that help them meet their children's daily and developmental needs. Important supports include home visiting services, child welfare systems that are responsive to young children's needs, and family-friendly employer policies that provide paid sick and family leave.

Ohio falls in the Improving Outcomes (O) tier of states when it comes to indicators of Strong Families. The state's high ranking in this domain is primarily due to the indicators in the Working Effectively (W) tier, including the percentage of infants and toddlers living in crowded housing, and the percentage of young children exiting foster care to permanency. However, Ohio is in the Getting Started (G) tier when it comes to the prevalence of adverse childhood experiences among infants and toddlers. Ohio does not require employers to offer paid sick days that cover care for children, nor does it have a paid family leave program.

Paid family leave	No <input checked="" type="checkbox"/>

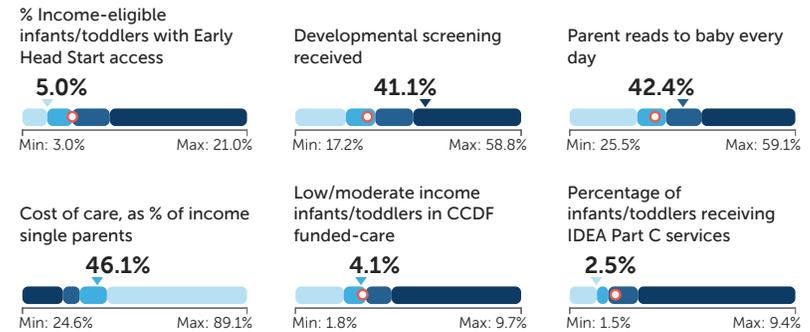

## What Defines Positive Early Learning Experiences?

Infants and toddlers learn through play, active exploration of their environment, and, most importantly, through interactions with the significant adults in their lives. The quality of babies' early learning experiences at home and in other care settings has a lasting impact on their preparedness for life-long learning and success. Parents who require child care while they work or attend school need access to affordable, high-quality care options that promote positive development.

Ohio scores in the Improving Outcomes (O) tier of states when considering key indicators related to early care and education and early intervention for infants and toddlers. The state's high ranking in the Positive Early Learning Experiences domain reflects indicators such as the percentage of infants and toddlers who received developmental screenings, and the percentage whose parents read to them every day. However, the percentage of income-eligible infants and toddlers with Early Head Start access and the percentage of young children receiving IDEA Part C services are in the Getting Started (G) tier.
