

Where children are born can affect their chances for a strong start in life. Babies need good health, strong families, and positive early learning experiences to foster their healthy brain development and help them realize their full potential.

This fact sheet provides a snapshot of how infants, toddlers, and their families are faring with respect to these three developmental domains. For each domain, selected child or family indicators and policy indicators are highlighted and compared to national averages. Important demographic information is also included. A summary table of all indicators is provided on the last page, for reference.

Demographics

Infants and toddlers in Oregon

Overview

Oregon is home to 140,796 infants and toddlers, representing 3.4 percent of the state's population. As many as 43 percent live in households with incomes less than twice the federal poverty line (in 2017, about \$50,000 a year for a family of four), placing them at economic disadvantage. America's youngest children are diverse and are raised in a variety of family contexts. A broad array of policies and services are required to ensure that all of them have an equitable start in life.

What is Good Health?

Good physical and mental health provide the foundation for babies to develop physically, cognitively, emotionally, and socially. The rate of brain growth is faster in the first 3 years than at any other stage of life, and this growth sets the stage for subsequent development. Access to good nutrition and affordable maternal, pediatric, and family health care are essential to ensure that babies receive the nourishment and care they need for a strong start in life.

Oregon falls in the Improving Outcomes (O) tier of states when it comes to the overall health of infants and toddlers. The state's high ranking in the Good Health domain primarily reflects its indicators in the Working Effectively (W) tier. On indicators of food security and nutrition, Oregon is primarily in the Working Effectively (W) tier. Some maternal health indicators, such as mothers' mental health, fall in the Getting Started (G) tier. Oregon's Medicaid plan covers early childhood mental health services in home settings, pediatric/family medicine practices, and early care and education programs.

Medicaid plan covers IECMH services at home	Yes <input checked="" type="checkbox"/>
Medicaid plan covers IECMH services at pediatric/family medicine practices	Yes <input checked="" type="checkbox"/>
Medicaid plan covers IECMH services at ECE programs	Yes <input checked="" type="checkbox"/>

What Defines Strong Families?

Young children develop in the context of their families, where stability and supportive relationships nurture their growth. All families of infants and toddlers benefit from support with parenting, and many—particularly those challenged by economic instability—need access to resources that help them meet their children's daily and developmental needs. Important supports include home visiting services, child welfare systems that are responsive to young children's needs, and family-friendly employer policies that provide paid sick and family leave.

Oregon falls in the Improving Outcomes (O) tier of states when it comes to indicators of Strong Families. The state's high ranking in this domain is primarily due to its indicators in the Improving Outcomes (O) tier, including the neighborhood safety indicator. However, the percentage of infants and toddlers in Oregon living in crowded housing is in the Getting Started (G) tier. Oregon requires employers to offer paid sick days that cover care for children. However, the state does not have a paid family leave program.

Paid family leave	No <input checked="" type="checkbox"/>

What Defines Positive Early Learning Experiences?

Infants and toddlers learn through play, active exploration of their environment, and, most importantly, through interactions with the significant adults in their lives. The quality of babies' early learning experiences at home and in other care settings has a lasting impact on their preparedness for life-long learning and success. Parents who require child care while they work or attend school need access to affordable, high-quality care options that promote positive development.

Oregon scores in the Reaching Forward (R) tier of states when considering key indicators related to early care and education and early intervention for infants and toddlers. The state's low ranking in the Positive Early Learning Experiences domain primarily reflects indicators of early care and education opportunities in the Getting Started (G) tier. However, the percentage of infants and toddlers receiving developmental screenings and the percentage with a moderate/severe developmental delay are in the Working Effectively (W) and Improving Outcomes (O) tiers, respectively.
