

Where children are born can affect their chances for a strong start in life. Babies need good health, strong families, and positive early learning experiences to foster their healthy brain development and help them realize their full potential.

This fact sheet provides a snapshot of how infants, toddlers, and their families are faring with respect to these three developmental domains. For each domain, selected child or family indicators and policy indicators are highlighted and compared to national averages. Important demographic information is also included. A summary table of all indicators is provided on the last page, for reference.

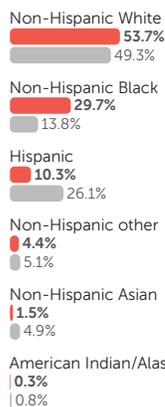

Demographics Infants and toddlers in South Carolina

Overview

South Carolina is home to 175,671 infants and toddlers, representing 3.5 percent of the state's population. As many as 57 percent live in households with incomes less than twice the federal poverty line (in 2017, about \$50,000 a year for a family of four), placing them at economic disadvantage. America's youngest children are diverse and are raised in a variety of family contexts. A broad array of policies and services are required to ensure that all of them have an equitable start in life.

What is Good Health?

Good physical and mental health provide the foundation for babies to develop physically, cognitively, emotionally, and socially. The rate of brain growth is faster in the first 3 years than at any other stage of life, and this growth sets the stage for subsequent development. Access to good nutrition and affordable maternal, pediatric, and family health care are essential to ensure that babies receive the nourishment and care they need for a strong start in life.

South Carolina falls in the Reaching Forward (R) tier of states when it comes to the overall health of infants and toddlers. The state's low ranking in the Good Health domain primarily reflects indicators in the Getting Started (G) tier, including most of those for nutrition and food security. South Carolina's Medicaid plan covers early childhood mental health services in home settings, pediatric/family medicine practices, and early care and education programs.

Six Key Indicators of Good Health

KEY ← Range of all state values → ▼ South Carolina ○ National average
G Getting Started **R** Reaching Forward **O** Improving Outcomes **W** Working Effectively

Good Health Policy in South Carolina

Medicaid expansion state	No ❌
State Medicaid policy for maternal depression screening in well-child visits	Required
Medicaid plan covers social-emotional screening for young children	Yes ✅
Medicaid plan covers IECMH services at home	Yes ✅
Medicaid plan covers IECMH services at pediatric/family medicine practices	Yes ✅
Medicaid plan covers IECMH services at ECE programs	Yes ✅

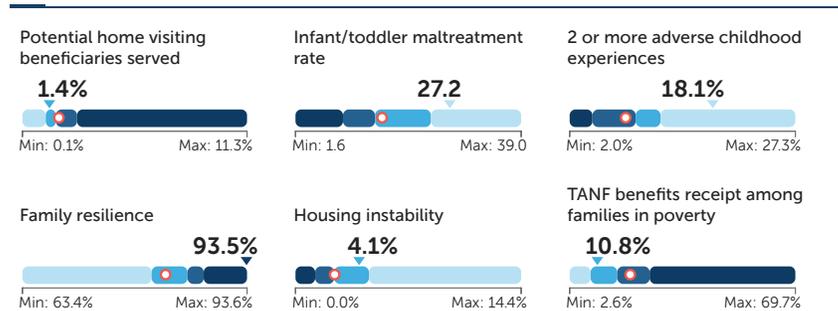

What Defines Strong Families?

Young children develop in the context of their families, where stability and supportive relationships nurture their growth. All families of infants and toddlers benefit from support with parenting, and many—particularly those challenged by economic instability—need access to resources that help them meet their children's daily and developmental needs. Important supports include home visiting services, child welfare systems that are responsive to young children's needs, and family-friendly employer policies that provide paid sick and family leave.

South Carolina falls in the Reaching Forward (R) tier of states when it comes to indicators of Strong Families. The state's low ranking in this domain primarily reflects that most indicators, across the subdomains, fall in the Getting Started (G) and Reaching Forward (R) tiers. However, the percentage of young children living in crowded housing is in the Working Effectively (W) tier. South Carolina does not require employers to offer paid sick days that cover care for children, nor does the state have a paid family leave program.

Paid sick time that covers care for child	No ❌
Paid family leave	No ❌

What Defines Positive Early Learning Experiences?

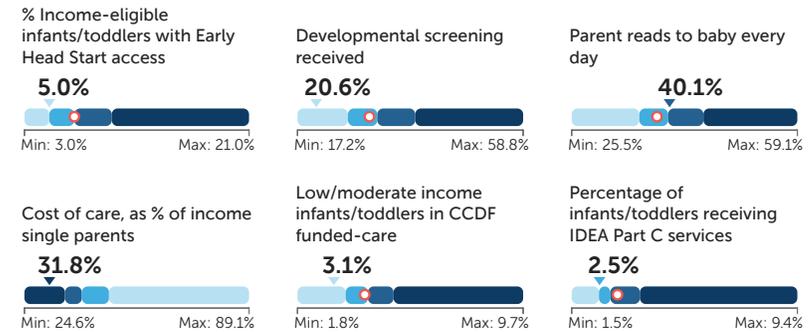

Infants and toddlers learn through play, active exploration of their environment, and, most importantly, through interactions with the significant adults in their lives. The quality of babies' early learning experiences at home and in other care settings has a lasting impact on their preparedness for life-long learning and success. Parents who require child care while they work or attend school need access to affordable, high-quality care options that promote positive development.

South Carolina scores in the Getting Started (G) tier of states when considering key indicators related to early care and education and early intervention for infants and toddlers. The state's low ranking in the Positive Early Learning Experiences domain is primarily due to the predominance of South Carolina's early intervention and prevention services indicators in the Getting Started (G) tier. The percentage of income-eligible infants and toddlers with access to Early Head Start, and the percentage of low/moderate income infants and toddlers in CCDF-funded care, are also in the Getting Started (G) tier. The average infant care costs (as a percentage of single parents' and married parents' incomes) are less burdensome in South Carolina than in many other states, placing South Carolina in the Working Effectively (W) tier for those indicators.
