

The State of Virginia's Babies R

Where children are born can affect their chances for a strong start in life. Babies need good health, strong families, and positive early learning experiences to foster their healthy brain development and help them realize their full potential.

This state profile provides a snapshot of how infants, toddlers, and their families are faring in each of these three policy domains. Within each domain, view data for selected child, family, and policy indicators compared to national averages. The profile begins with a demographic description of the state's babies and families to offer the broadest context for exploring what may be very different experiences of the state's youngest children.

Demographics

● Virginia ● National Average

Infants and toddlers in Virginia

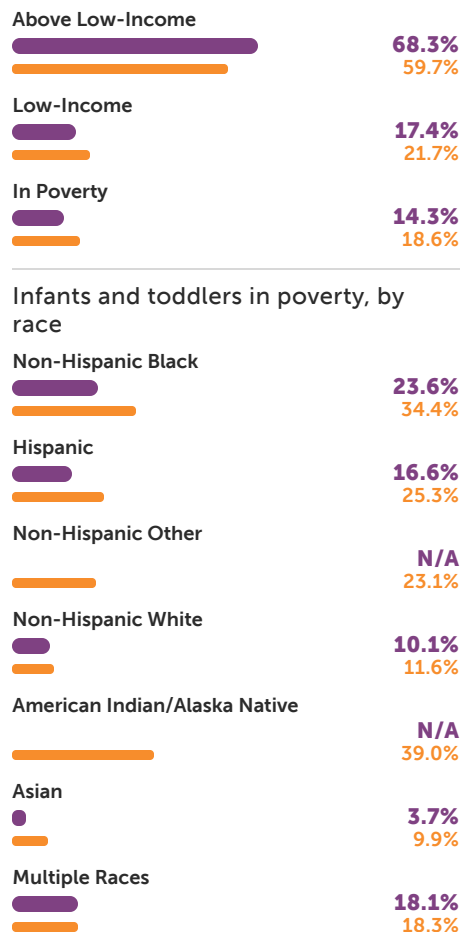

Virginia is home to 299,132 babies, representing 3.5 percent of the state's population. As many as 31.7 percent live in households with incomes less than twice the federal poverty line (in 2019, about \$51,500 a year for a family of four), placing them at

economic disadvantage. The state's youngest children are diverse and are raised in a variety of family contexts and household structures.

How are Virginia's babies faring in Good Health?

Supporting babies' and mothers' physical and mental health provides the foundation for infants' lifelong physical, cognitive, emotional, and social well-being. Babies' brains grow rapidly in the first years of life, and, in these early years, the brain works with other organs and organ systems to set the stage for subsequent development and health outcomes. Equitable access to good nutrition during the prenatal period and first years of life is key to ensure that babies receive the nourishment and care they need for a strong start in life. Strengthening equitable access to integrated, affordable maternal, pediatric, and family health care is also essential to meeting babies' and families' health and developmental needs.

Virginia falls in the Improving Outcomes (O) tier for the Good Health domain. A state's ranking is based on indicators of maternal and child health, including health care coverage, prenatal care, birth outcomes, and receipt of recommended preventive care as well as food security, nutrition, and mental health. Virginia performs better than national averages on key indicators, such as the percentages of babies breastfed at 6 months and babies receiving recommended vaccinations. The state is performing worse than national averages on indicators such as the percentages of babies receiving preventive dental care and uninsured babies in families with low income.

Key Indicators of Good Health

● Virginia ● National Avg

Uninsured low-income infants/toddlers

Ever breastfed

Infants breastfed at 6 months

High weight-for-length†

Late or no prenatal care received

Mothers reporting less than optimal mental health

Infant mortality rate (deaths per 1,000 live births)

Babies with low birthweight

Preterm births†

Preventative medical care received

Preventative dental care received

Received recommended vaccines

Medical home†

How are Virginia's babies faring in Strong Families?

Young children develop in the context of their families, where stability, safety, and supportive relationships nurture their growth. All families may benefit from parenting supports, but children and families of color face numerous challenges as a result of racism that impact their everyday life, which are exacerbated even more for children and families living in households with low income. Many policies can be designed to address these disparities by race, ethnicity, and income, including the provision of safe and stable housing, home visiting services, family-friendly employer policies, economic support for families with low income, and tax credits that benefit families with young children.

Virginia falls in the Reaching Forward (R) tier of states when it comes to indicators of Strong Families. The state's ranking in this domain reflects indicators on which it is performing better than the national average, such as the percentages of babies living in crowded housing and babies experiencing housing insecurity (moved 3 or more times). Virginia is doing worse than the national average on indicators such as the percentages of parents who report being resilient and babies who could benefit from home visiting receiving those services.

Positive Early Learning Experiences

How are Virginia's babies faring in Positive Early Learning Experiences?

Infants and toddlers learn through interactions with the significant adults in their lives and active exploration of enriching environments. The quality of infant and toddlers' early learning experiences at home and in other care settings can impact their cognitive and social-emotional development, as well as early literacy. High-quality early childhood care can strengthen parents' interactions with their children in the home learning environment and support parents' ability to go to work or attend school. Equitable access to high-quality care across factors like race, ethnicity, and income ensures all infants and toddlers have the opportunity for optimal development; however, disparities in access to high-quality care remain across many states and communities in the United States.

Virginia scores in the Getting Started (G) tier for Positive Early Learning Experiences. The state's ranking in this domain reflects indicators on which it is performing better than the national average, such as the higher percentage of parents who report singing songs or telling stories to their infants and toddlers every day. Virginia is doing worse than the national average on indicators such as the lower percentage of infants and toddlers who received a developmental screening. Infant care costs as a percentage of the state's median income for single and married parents also contribute to the ranking.

Key Indicators of Positive Early Learning Experiences

● Virginia ● National Avg

Parent reads to baby every day

Parent sings to baby every day

Percentage of income-eligible infants/toddlers with Early Head Start access

Cost of care, as % of income single parents

Cost of care, as % of income married families
